## the string game

### 1 year anniversary!

It was this time last year that The String Game was created, inspired by architect Frank Lloyd Wright's concept of free-flowing space known as the "destruction of the box."

Wright's idea of interconnectedness – which he achieved by removing all the corners of his Victorian house – transformed the traditional box into a unified network, each room connected to another by an overlapping connection.

The String Game applies this concept to knowledge. Each fact is a room that, unless connected to another unit of understanding in your long term memory, will eventually fall below a certain threshold and be forgotten.
